

Vacuum Egg Transfer Machine

- **Easy to clean**
- **Removable vacuum cups**
- **Safe transfer, even with missing eggs**
- **Constructed on wheels**
- **Built-in vacuum pump**
- **User-friendly operation**
- **Constructed in stainless steel**

Handling quality eggs demands skill, experience, dedication, and a little support from LINCO!

Technical description

- **Easy to clean**
The transfer system is constructed with a closed frame. Electric cables and air hoses are placed inside the stainless steel framework.
- **Removable vacuum cups**
The vacuum cups can be removed easily, giving free access to the vacuum manifold.
- **Safe transfer**
The transfer system is designed to provide safe transfer of the eggs. Even when eggs have been removed from the setter tray (i.e. during candling), there is no risk of eggs dropping from the system.
- **Constructed on wheels**
The transfer system is made in a light construction with four swivel wheels, allowing the unit to be easily moved to another working place.
- **Built-in vacuum pump**
The vacuum pump is placed in a covered chamber in the bottom of the machine, and other technical installations are placed in a waterproof control box under the tray table.
- **User-friendly operation**
The transfer system is constructed to ensure good working conditions for the operators. The height of the frame is adjustable and the transfer frame slides easily and gently when pushed to the opposite position. An extensive manual will guide the operator through all steps.

Technical specifications

Capacity:	30.000 eggs/hour
Electrical supply:	230V, 50/60 cycles
Power consumption:	1,0 kW
Air consumption:	30 l/min
Air pressure:	6 bars
Material:	Stainless steel 304
